

OnPoint Authority Systems — Systems Book (Master)

Version: v2026-02-17r2 | Status: Working Master | Owner: CEO Control Layer

Purpose

This Systems Book is the canonical operating manual for OnPoint Authority Systems. It defines:

- the enterprise folder architecture and naming rules,
- version locking + registries (what is “live” vs. “draft”),
- the deal room workflow (Teaser → NDA → CIM → Buyer Deck → Appendix Pack),
- the Authority OS operating rhythm and governance,
- website architecture mapping so the site stays synchronized with the system.

How to Use

- If you’re building the business: follow SB-01 → SB-03.
- If you’re selling/raising: follow SB-02.
- If you’re building the public-facing site: follow SB-04.
- If you’re enforcing accuracy: follow SB-00 and the registries.

SB-00 — Master Control

SB-00.1 Canonical Truth Rules

These rules keep the system synchronized and audit-ready:

1. One Master per asset (CIM, Buyer Deck, Teaser, etc.). All other files are format outputs.
2. Version-locked releases only go external (no “working drafts”).
3. Registry-driven: every external file must have a matching registry entry (ID, version, status, hash/size, owner, distribution rules).
4. Naming is non-negotiable. If a file is renamed manually, it is “uncontrolled.”

SB-00.2 Folder Architecture (Top Level)

- 00 MASTER CONTROL/
- 01 CEO CONTROL LAYER/
- 02 AUTHORITY OS/
- 03 DEAL ROOM/
- 04 APPENDIX PACK/
- 05 LEGAL & COMPLIANCE/

- 06 WEBSITE & CONTENT OPS/
- 99 ARCHIVE/

SB-00.3 File Naming Standard (Canonical)

Pattern: OnPoint____vYYYY-MM-DDrN.

Examples:

- OnPoint_CIM_External_v2026-02-17r2.docx
- OnPoint_Buyer_Deck_External_v2026-02-17r2.pptx
- OnPoint_Teaser_External_v2026-02-17r2.pdf
- OnPoint_Appendix_Pack_External_v2026-02-17r2.zip

SB-00.4 Registries (Must Exist)

Minimum registries:

- Version Registry (single source of truth for what's live)
- CIM Registry (CIM-specific release tracking)
- Distribution Log (who received what, when, and under which NDA)

Required columns (minimum):

- Asset ID
- Asset Name
- Version
- Status (Draft / Review / Released / Retired)
- Release Date
- Owner
- Format Outputs (links)
- Notes / Change Summary

SB-00.5 Change Control Workflow (Simple)

- Draft → Review → Release → Distribute → Archive previous release
- Only the Release step generates the external outputs (PDF, PPTX, web export, etc.).

SB-01 — CEO Control Layer

SB-01.1 Executive Dashboard

Purpose: live CEO-level visibility across the business.

Core KPI groups:

- Sales pipeline + conversion
- Revenue, gross margin, cash
- Delivery operations (cycle time, quality, rework)
- Customer experience (NPS/CSAT, referrals)
- People (capacity, utilization, hiring plan)

Outputs:

- Weekly CEO snapshot (1 page)
- Monthly board / investor summary (5–10 pages)

SB-01.2 Financial Models

Canonical artifacts:

- 3-Year Financial Model
- Revenue Forecast
- Valuation Model
- Sensitivity Analysis

Control rules:

- Only one “Master Model” workbook is editable.
- PDF exports are read-only outputs tied to a release.

SB-01.3 Investor / Buyer Pipeline

Canonical artifacts:

- Buyer Outreach CRM
- Investor Pipeline Tracker
- NDA Tracker
- Investor Communications templates

SB-02 — Deal Room (M&A; / Capital Raise)

SB-02.1 Canonical External File Set (Release Package)

This is the only external package:

1. Teaser (blind / sanitized, no sensitive details)
2. NDA Email + NDA (gating step)
3. CIM (full narrative)
4. Buyer Deck (presentation)
5. Appendix Pack (supporting docs + exhibits)

SB-02.2 Gating Workflow (Required)

Teaser → Interested party request → NDA email → NDA signed → CIM access → Buyer Deck call → Appendix Pack access

SB-02.3 Deal Room Folder Layout

- 03 DEAL ROOM/
- 01 Teaser/
- 02 NDA/
- 03 CIM/
- 04 Buyer Deck/
- 05 Disclosures & Q&A;/
- 06 Distribution Logs/

SB-02.4 Release Checklist (Before External Send)

- Version Registry updated
- CIM Registry updated
- Distribution Log entry created (or placeholder created)
- PDF outputs verified (no tracked changes, no comments)
- Links tested (OneDrive sharing permissions correct)
- Approved by Owner (CEO Control Layer)

SB-03 — Authority OS (Internal Operating System)

SB-03.1 Operating Rhythm (Cadence)

- Daily: pipeline + execution alignment (15 min)
- Weekly: CEO dashboard review + priority reset (60 min)
- Monthly: operating review + scorecard (90 min)
- Quarterly: strategy + resource allocation (half-day)

SB-03.2 Governance

- Roles: Owner, Editor, Reviewer, Approver
- System rule: “No approval, no release.”

SB-03.3 Automation Principles

- Automate capture (intake forms, CRM, deal room requests)
- Automate reporting (dashboards, weekly snapshots)

- Automate versioning (registry update + release packaging)

SB-04 — Website & Content Ops (Synchronization Layer)

SB-04.1 Source of Truth Mapping

- Word/Docx Master = canonical long-form narrative (CIM, Systems Book)
- Notion = structured databases + operational dashboards
- Website = published pages derived from canonical sources

SB-04.2 Content Types (Recommended)

- Page: About, Platform, Case Studies, Authority OS, Investor Relations (gated)
- Post: Insights, News, Updates
- Library: PDFs (released only), decks, one-pagers

SB-04.3 Publishing Workflow (No Drift)

1. Update Master (Word / Notion)
2. Release version (registry updated)
3. Export website-ready copy (web formatting rules)
4. Publish to site (tagged with version)
5. Archive previous website version snapshot

SB-04.4 Website Page Coding Standard

Use the same section codes everywhere (website anchors, Notion headings, Word headings):

- SB-00 Master Control
- SB-01 CEO Control Layer
- SB-02 Deal Room
- SB-03 Authority OS
- SB-04 Website & Content Ops

Example website anchors:

- /systems-book#SB-02
- /systems-book#SB-02-4-release-checklist

Appendix A — OneDrive “Create Folders” Cut/Paste Scripts

A1. PowerShell (Windows)

```
$root = "OnPoint Authority Systems, Inc."
$folders = @(
    "00 MASTER CONTROL",
    "01 CEO CONTROL LAYER\01 Executive Dashboard",
    "01 CEO CONTROL LAYER\02 Financial Models",
    "01 CEO CONTROL LAYER\03 Investor Pipeline",
    "02 AUTHORITY OS",
    "03 DEAL ROOM\01 Teaser",
    "03 DEAL ROOM\02 NDA",
    "03 DEAL ROOM\03 CIM",
    "03 DEAL ROOM\04 Buyer Deck",
    "03 DEAL ROOM\05 Disclosures & Q&A",
    "03 DEAL ROOM\06 Distribution Logs",
    "04 APPENDIX PACK",
    "05 LEGAL & COMPLIANCE",
    "06 WEBSITE & CONTENT OPS",
    "99 ARCHIVE"
)

New-Item -ItemType Directory -Path $root -Force | Out-Null
foreach ($f in $folders) {
    New-Item -ItemType Directory -Path (Join-Path $root $f) -Force | Out-Null
}
Write-Host "Created folder set under: $root"
```

A2. Bash (Mac/Linux)

```
ROOT="OnPoint Authority Systems, Inc."
mkdir -p "$ROOT"/{"00 MASTER CONTROL","01 CEO CONTROL LAYER/01 Executive Dashboard","01 CEO CONTROL LAYER/02 Financial Models","01 CEO CONTROL LAYER/03 Investor Pipeline","02 AUTHORITY OS","03 DEAL ROOM/01 Teaser","03 DEAL ROOM/02 NDA","03 DEAL ROOM/03 CIM","03 DEAL ROOM/04 Buyer Deck","03 DEAL ROOM/05 Disclosures & Q&A","03 DEAL ROOM/06 Distribution Logs","04 APPENDIX PACK","05 LEGAL & COMPLIANCE","06 WEBSITE & CONTENT OPS","99 ARCHIVE"}
echo "Created folder set under: $ROOT"
```

Appendix B — Next Build Targets (So We Keep Momentum)

1. Expand SB-01 into a CEO playbook (dashboards, weekly report template, meeting agendas).
2. Expand SB-02 into a deal room SOP (email scripts, permissioning rules, Q&A; workflow, data room index).
3. Expand SB-04 into a website architecture spec (site map, page templates, component rules, SEO, analytics).
